## **DETAILED ACTION**

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - Claims 1-52 and 59-72, drawn to a magnetoresistive element, classified in class 428 subclass 692.
  - II. Claims 53-58, drawn to a method for making a magnetoresistive element, classified in class 427, subclass 130.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product could have been made via a different method, such as forming a magnetoresistive film without heat treating the magnetic layers.
- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

## Species/Election

4. Regardless of whether the applicant elects group I or group II, Claims 1, 19, and 57-58 are generic to a plurality of disclosed patentably distinct species. The following species are considered by the examiner to be patentably distinct:

Art Unit: 1773

Species comprising a magnetoresistive element having either a synthetic
(multiple magnetic layers separated by an intermediate) free or synthetic pinned
magnetic layers arranged at positions m, wherein the product of the saturation
magnetization X thickness of odd m is substantially equal to that of even m.

Page 3

- Species comprising a magnetoresistive element having either a synthetic
   (multiple magnetic layers separated by an intermediate) free or synthetic pinned
   magnetic layers arranged at positions m, wherein the product of the saturation
   magnetization X thickness of odd m is different from that that of even m.
- Species comprising a magnetoresistive element comprising a synthetic pinned or synthetic free magnetic layer, wherein the product of the saturation magnetization and the thickness of odd m is different from that of even m, wherein the synthetic magnetic layer comprises exactly 2 magnetic layers separated by an intermediate layer.
- Species comprising a magnetoresistive element comprising a synthetic pinned or synthetic free magnetic layer, wherein the product of the saturation magnetization and the thickness of odd m is different from that of even m, wherein the synthetic magnetic layer comprises 3 or more magnetic layers separated by a intermediate layer.
- Species comprising a synthetic pinned or synthetic free magnetic layer, wherein
  the intermediate layer is required to be insulative (thus forming a tunneling
  magnetoresistive element or a tunneling magnetic junction)

Application/Control Number: 10/848,742

Art Unit: 1773

- Species comprising a synthetic pinned or synthetic free magnetic layer, wherein the intermediate layer is required to be conductive (thus forming a spin valve structure).
- 5. The applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

6. A telephone call was made to Douglas Muellar on 09/22/04 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Application/Control Number: 10/848,742

Art Unit: 1773

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nikolas J. Uhlir whose telephone number is 571-272-

1517. The examiner can normally be reached on Mon-Fri 7:30 am - 5 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Deborah Jones can be reached on 571-272-1535. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
